Spectrum^{NG}

CLOUD SOFTWARE

Without Hosting.

Spectrum^{NG} helps usher your club into the dynamic age of cloud computing with a complete data management solution, without the overhead. CSI Software now leverages Microsoft's Azure cloud platform, offering a true SaaS (software as a service) model and PaaS (Platform as a Service) in the cloud.

The cloud is scale, flexibility, and a reduction in operating costs. And our SaaS offering is an ongoing membership to the industry-leading data management software.

SEE WHAT SPECTRUM^{NG} DOES IN THE CLOUD:

- **Completely Scalable** – cloud technology grows with your business allowing Spectrum^{NG} to handle any sized workload.

- **Instant Connectivity** – enjoy faster turnarounds when adding more usage power.

- **Cost Efficiency** – eliminate investment in hardware, networks and stand-alone servers. And reduce operating costs for IT management services like data storage, software updates and system maintenance.

- **Easy Access** – uses Internet protocols to run and access applications.

- **Multiple Points of Access** – secures convenient access from the office, satellite location or mobile device. Access Spectrum^{NG} at any time and anywhere.

- **Simple Connectivity Setup** – requires minimal end-user setup for program log-ins (Dedicated ports and IP addresses).

- **Clusters** – applications and data become part of server clusters that ensure Spectrum^{NG} is always on.

- **Quick Deployment** – deploy updates fast, with minimal downtime and service interruption.

- **Files Sync** – end user application files are automatically synced, keeping application files consistent so computers never miss an update.

CSI has built Spectrum[NG] directly into the cloud, creating an on-demand platform for clubs wanting to increase responsiveness and maximize efficiency. Only pay for the resources you use. Eliminate hardware while offloading maintenance. And empower more users by meeting Spectrum[NG] directly at the application.

Our SaaS model allows you to think of your IT resources as an asset. Free to grow your business instead of adding costs to it. Enjoy the operational benefits of the cloud without sacrificing the power of Spectrum[NG]. Talk to us and discover why the cloud is right for you.

Get to Know the Cloud

Cloud computing is not a trend, and IT professionals are familiar with the basic cloud concepts promising greater flexibility and better resource management. However, jargon and hype often obscure businesses from harnessing the potential of the cloud.

The industry standard definition of cloud computing is a model for enabling ubiquitous, convenient, on-demand network access to a shared pool of configurable computing resources that can be rapidly provisioned and released with minimal management effort or service provider interaction.

It means you can scale your IT resources up or down to meet demand. It means pay-as-you-go rates for self-service access over the Internet. As for the impact on business, cloud computing also means cost savings, energy savings, rapid deployment and customer empowerment.

The cloud offers an alternative to owned, on-site IT infrastructure. Applications are now available from any desktop or web browser, while software and data are stored on servers at a remote location. Moving to the cloud changes the way your business consumes IT, transforming former cost centers into new opportunities for revenue growth. Adapting to the cloud requires a different mindset because former investments in hardware, data centers, IT staff and security are replaced by applications and services bundled as a cloud of IT services.

CSI Software has identified five key benefits for health and fitness clubs interested in migrating their IT infrastructure to the cloud.

- On-demand self-service

- Broad network access

- Resource pooling

- Rapid elasticity

- Economies of scale

Spectrum[NG] in the Cloud

Multiple cloud service models and deployment methods muddy the waters for business leaders seeking answers to rising operating costs and inflexible IT architectures. CSI Software delivers a simple, streamlined SaaS solution packed with the same core capabilities of Spectrum[NG]'s traditional single-source design, with all the same data management advantages.

With our SaaS model, Spectrum[NG] and your data become hosted on the cloud. This allows users to access Spectrum[NG] directly from any Internet enabled device. Together with Microsoft Azure, CSI Software delivers a premium cloud-computing environment full of today's cloud power.
